DETAILED ACTION

1. Claims 8-11, 13-20, 28-30 and 32-45 are pending in the application.
2. Claims 1-7, 12, 21-27 and 31 have been canceled.

Allowable Subject Matter

3. Claims 8-11, ~~12~~¹³-20, 28-30 and 32-45 and re-numbered as claims 1-29 are allowable over the prior art of record because the cited references do not contain the specified limitations of an apparatus receiving a signal having first and second codes interleaved with each other, the apparatus comprising: a correlator unit correlating the received signal with first and second reference codes corresponding to the first and second interleaved codes, respectively, and generating correlation signals; an even code detector coupled to the correlator unit, for detecting from the correlation signals one of the first and second codes, and outputting an even code correlation signal; an odd code detector coupled to the correlator unit, for detecting from the correlation signals one of the first and second codes not detected by the even detector and outputting an odd code correlation signal; and a processing unit for processing the even and odd correlation signals to provide timing information, wherein the processing unit includes a delay unit coupled to the even and odd code detectors, delaying at least one of the even and odd code correlation signals, and outputting a delayed correlation signal and an undelayed correlation signal, and a merit function unit coupled to the delay unit combining the delayed, and undelayed correlation signals according to a merit function, and a timing unit coupled to the merit

function unit for detecting a phase of the first code and a phase of a second code based on the combined correlation signals meeting a threshold value.
